# Differentia Consulting Smarter.PMO ...powered by Qlik Q®

Improve programme performance

Smarter.PMO is an extensible dashboard application[1] that allows you to see your programmes and project portfolios in new ways. Deeper and broader insight into your project information drives operational efficiency, improves your ability to anticipate risks and increases earned value. Controlled agility helps you better anticipate and effectively act on changing project variables to improve quality.

Reinforce governance and control

Smarter.PMO allows you to easily govern and control the structures and processes across your programme. It facilitates engagement with the stakeholders making accountability real. Structural anomalies are instantly identified for correction while externally driven changes can be managed by Smarter.PMO minimising disruption to individual projects.

Foster collaborative improvement

Having a single view of all project disciplines from safety to cost management and risk to project scheduling enables you and your teams to make the right decisions at the right time.

Smarter.PMO encourages collaboration to manage current issues and more importantly empowers you to make the required process changes to prevent issues recurring. Your project disciplines can then continually learn from and improve their combined performance while reducing time spent firefighting.

Deliver programmes smarter

Smarter.PMO provides a framework to:

- Anticipate and act on changing needs and opportunities
- Deliver the fundamental principles of quality
- Make decisions, monitor and report in an agile fashion
- Understand and mitigate risks
- Maintain transparent processes and information

- Join the flow of information within the organisation and offer wider community collaboration.

Maximise your PPM investments

Smarter.PMO improves the depth and speed of visibility into your Project Portfolio Management data to enable better decision making.

Traditional BI and desktop analytic solutions are complemented and supplemented to provide affordable and cost effective:

- guided analytics for analysts
- self-service visualisation for users and managers
- effective discovery and interactive analysis for all

…in a matter of days or weeks, not months or years!

These discovery options empower users with rapid answers to the burning questions they need answered in order to manage and optimise all aspects of project performance.

In addition to the productivity gains experienced by users by adopting a common centralised platform, reporting can be delivered in a manner that is more efficient and robust from a data management, governance, security and cost point of view.

Client Feedback

"Smarter.PMO puts all of our project information in one place and has cut more than a week's effort per month from our reporting cycle. The greatest benefits though are having integrated information across all project disciplines enabling us to quickly identify opportunities and issues and providing package level insight in minutes as opposed to days. Differentia Consulting delivered this enterprise ready solution in less than one tenth of the time of a comparable BI offering meaning we achieved full ROI in under three months."

Gordon Grimond, Programme Controls Lead, Global Management, Engineering and Development Consultancy
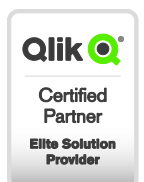

Establish a fit-for-purpose architecture

Smarter.PMO with QlikView/Qlik Sense can be implemented as a departmental or enterprise solution to support your specific goals. Differentia Consulting uses a robust implementation methodology to help drive adoption, fast track projects and provide a rapid return to the business. It caters for both tactical and business-critical requirements and ensures your implementation is fit for purpose, based on your specific Enterprise Architecture requirements for:

- Data architecture and system governance
- Document change control
- Infrastructure sizing and deployment options including cloud deployments
- Performance monitoring
- Resilience - DR and High availability
- Security
- System administration and QA

Implement a complete solution

Differentia Consulting is a Qlik Elite Solution Provider offering the highest quality of services available. Our services team deliver both onsite and offsite; QlikView/Qlik Sense configuration, deployment, management and support services. Differentia Consulting also offers a full set of application and infrastructure Managed Services that include ongoing support services, fully hosted and/or managed solutions on premise or in the cloud.
