Countdown to GDPR:
Is your BI & Analytics setup ready for GDPR Compliance?

Deadline: 25 May 2018

What is GDPR?

GDPR is the challenging new EU General Data Protection Regulation

- GDPR is a complex and comprehensive new regulation affecting most organizations
- Whether you're a EU-based business or not, if you have customers or employees in the EU you need to become compliant by adopting "best practice"
- Not complying will result in huge fines. Sanctions for offences relating rights and obligations can be as high as **20 Million Euros or 4% of turnover**
- Discovery Hub® supports GDPR compliance of your BI, Reporting & Analytics setup, so you can automatically **document:**

  - What data you hold
  - Where you hold it
  - What it is used for
  - Who has access to it

- If your current BI, reporting & Analytics setup gives front-end tools direct access to data sources, it makes it difficult to become compliant

# GDPR – Your Running Shoes Are On, But Do You Know Where To Go?

Deloitte "…it is time to move from guessing and assumptions towards action. That time will run out, long before we reach the deadline for compliance in relation to GDPR."

GDPR Compliance Test

- Is your BI, Reporting & Analytics solution fully documented?

- Do you have full traceability of all your data in your BI, Reporting & Analytics setup?

- Are you in control of data in your development and test BI, Reporting & Analytics environments?

- Do you manage access control to data in your BI, Reporting & Analytics setup and can you document this?

Multiple BI front-end tools
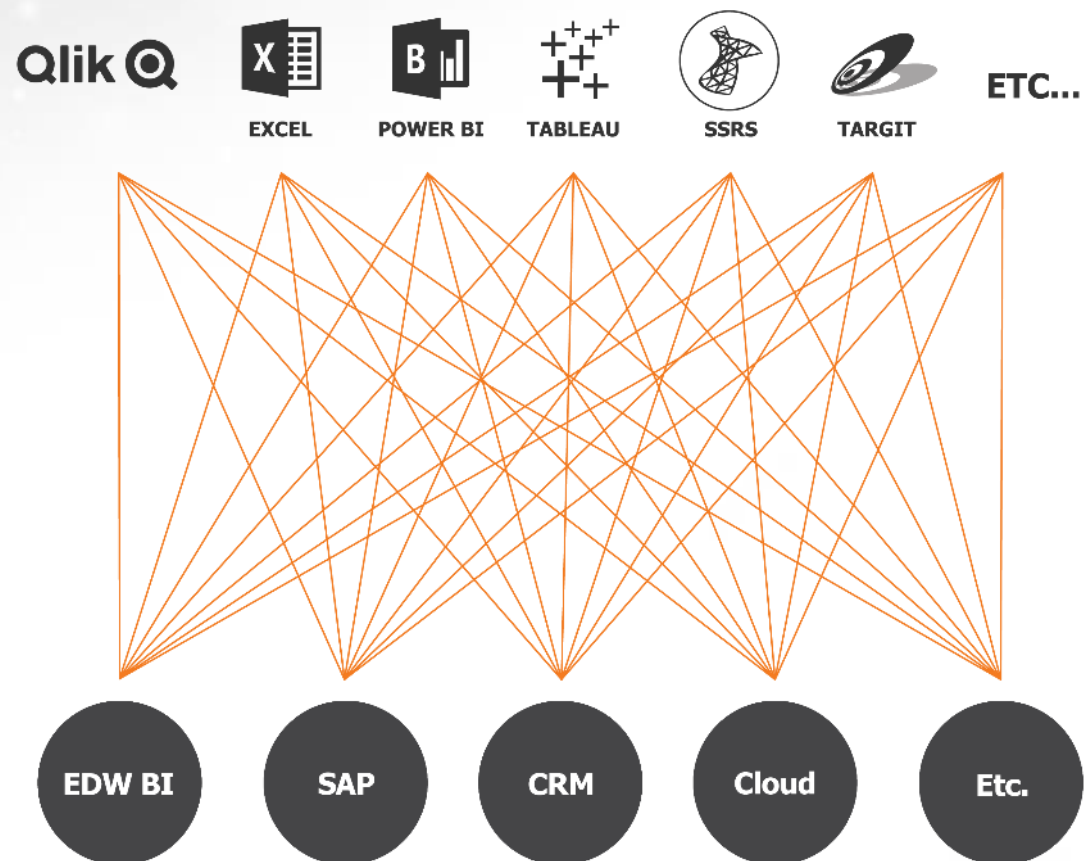

Bad practice is no longer an option, with GDPR your customers need Discovery Hub® for:

- Governed Access to Personal Data and Personal Identifiable Information
- Compliance for the Right to be forgotten
- Anonymizing/masking/aggregating data
- Governance of Multiple front-ends
- Automated platform with process documentation avoid risks of manual processes
- Agile/Responsive to Process Compliance

We are here to support you on your GDPR journey

Compliance and agility are no longer opposites

Boris Evelson, Forrester Research:

"Today, compliance has to be agile. Nobody can afford to wait for months and months to document something or to make a change in a compliant process.
So a tool like Discovery Hub® which
*A, automates the entire data to insights process*
B, provides instant reverse-engineered documentation which can be handed over to regulators at any point and it provides out of the box impact analysis and data lineage analysis.
That's compliance and agility which are no longer antonyms, they're now synonyms"

Discovery Hub®

Future-proof business agility

- **Automated documentation** – Document what data you hold and where.

- **Data lineage and impact analysis** – Where does my data come from and where is it used?

- **Security** – Who has access to my data?

- **Aggregations – Anonymization**/mask personally identifiable information.

- **Multiple front-ends** incl. Qlik. Qlik self service users do not access sources directly – instead they access data from the semantic layer.

- **Hybrid** - Available in the Cloud & On-Premises.

- **A COMPLIANT, robust, AUTOMATED and dynamic data infrastructure.**
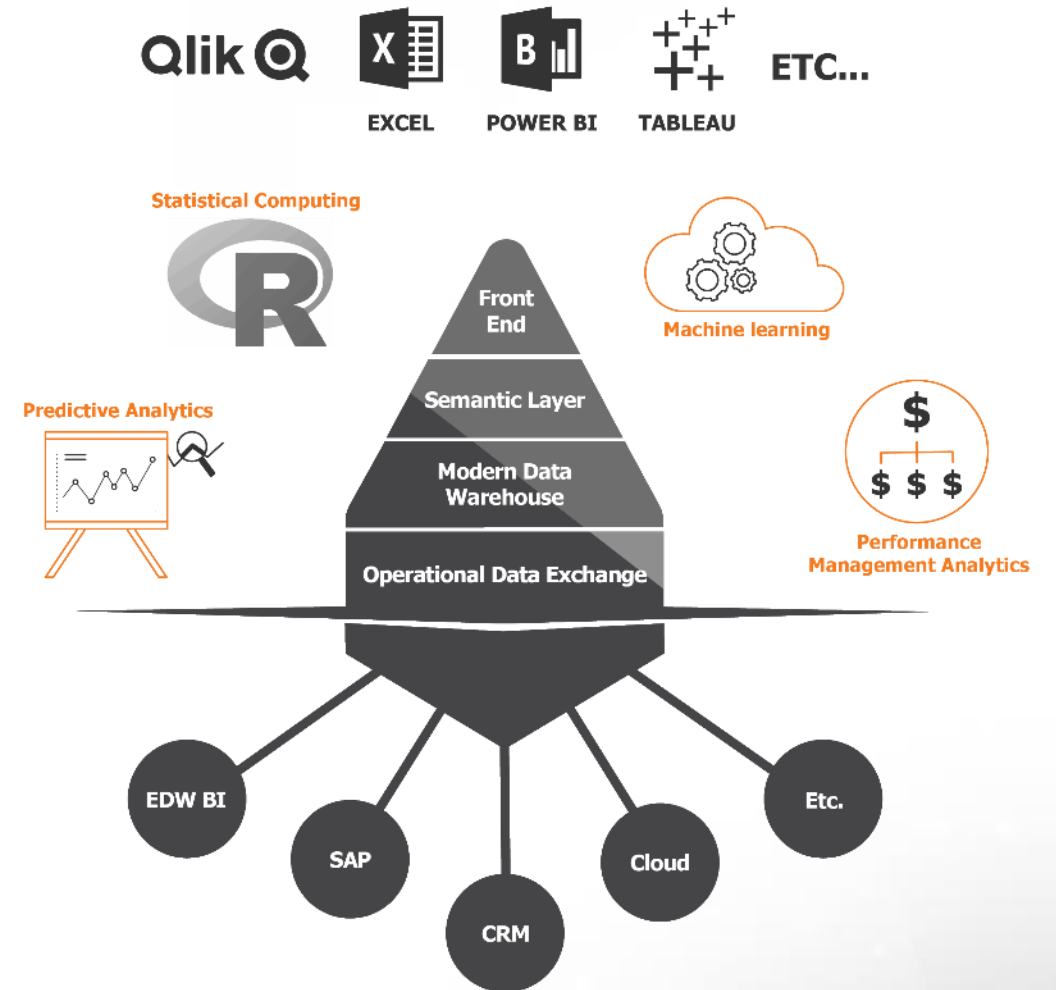

So you can arrive safe and sound
